

# Rethink RESPONSIBLY

Our approach to sustainability is to always think of better ways to create the highest quality packaging with the least environmental impact.

At Tekni-Plex, we are always thinking, and rethinking, about ways we can design, create and deliver responsible packaging that protects customers' brands, their consumers' experiences and the environment.

We strive to integrate processes where all materials can be reused, to contribute to a Circular Economy, so we can make the most of the resources available to us.

**OUR PRODUCTS** Our **Foam Polystyrene solutions** are among the most efficient food packaging options available combining shock protection, temperature insulation, energy efficiency and affordability.

**Our rPET solutions** are made with 100% recycled PET resin, mainly coming from beverage bottles, therefore also contributing to our circularity objectives.

Both materials are lightweight, strong, leak- and moisture-resistant, clean, sanitary and designed for optimum stacking and nesting and they can also be recycled!

**OUR MINDSET** We will always start (and finish) with the positives. This is reflected in our company-wide efforts toward greater sustainability, and proven in our drive toward achieving best-in-class status in the United Nations' Sustainable Development Goals (SDG) by 2030. And lived every day, as we strive to:

- Maximize recycled material content.
- Minimize -- perhaps even eliminate -- wasted materials.
- Create easier access to recycling centers and closed loop programs.

**OUR SOCIETY** We invite you to rethink your actions, your habits and your mindset responsibly. Think about circularity. If all materials are properly discarded, sorted and recycled, we'll create a circular economy which will ensure we will always use the best material for each application and endlessly reuse them - closing the loop on waste and ensuring the future of the generations to come.

All of our Dolco facilities are collection points for Foam Polystyrene with both mail-in and drop-off options.

For more information on PS foam recycling facilities visit <https://tekni-plex.com/our-businesses/dolco/dolco-recycling>

# SAFE & EFFICIENT SUPPLY CHAIN

## REDUCE

Foam polystyrene weighs up to **3 times less** than pulp or other plastic alternatives.

Plastics are one of the best materials for protecting the integrity of your food product. Great for protecting eggs during transportation and storage.

Foam polystyrene is made of only 6% actual polystyrene resin. Our products are actually 94% air. You could say, we're only 6% away from being nothing!

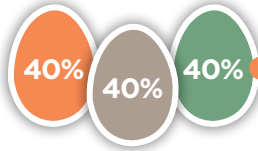

## REUSE

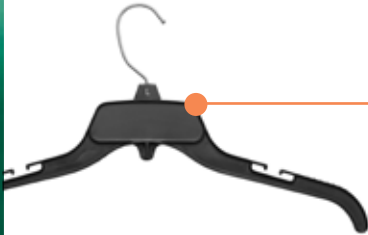

At least 33% of the total annual Foam Polystyrene consumption at Dolco comes from either PCR or PIR resin. All of our PET egg cartons contain post-industrial recycled resin.

## OUR RECYCLING STORY

Our green, beige and orange egg cartons are made using 40% post-industrial recycled resin.

Tekni-Plex partners with Walmart in a program designed to recycle Walmart polystyrene hangers at our Decatur plant, which results in 5% of post-consumer recycled resin used in our pink egg trays sold through Walmart.

Tekni-Plex uses about

**10 million**

pounds of post-industrial recycled polystyrene in production every year.

## RECYCLE
